

# United Kingdom

Enhancing wildlife and biodiversity  
with forestry projects

For the 2025/2026 planting season, some of the 20+ planted species:

Hawthorn

Crab Apple

Blackthorn

The UK has a vast range of ecosystems, from the towering Scottish Highlands to the leafy woodlands of England, home to species like the red deer and European badger. However, deforestation has historically had a profound impact on these ecosystems, resulting to habitat loss and decreased species diversity.

Our tree planting projects are located across the UK's diverse ecosystems. This approach allows us to tailor our efforts to each unique environment, enhancing the impact of our work. By planting a wide range of UK native tree species, we can also maximise the benefits for wildlife and increase soil stability.

## UK Planting Sites Overview

### England - Derbyshire - £4.00 per tree

#### Project Goals (GB-DB2):

This projects involves planting at a children's outdoor camp, which has been designed to introduce more tree cover to the site. In particular, we are planting conifer trees alongside the perimeters of the site to offer year-round privacy for children on site.

#### Benefits & SDG's achieved:

#### Species include..

Downy Birch

English Oak

+12

### England - Derbyshire - £5.30 per tree

#### Project Goals (GB-DB1):

This projects involves planting at a children's outdoor recreational centre, contributing to their rewilding and conservation programme, run as part of their curriculum. This project will also form part of a lapwing habitat creation on site along the field boundaries.

#### Benefits & SDG's achieved:

#### Species include..

Alder

Sessile Oak

+8

## UK Planting Sites Overview

### England - West Sussex - £5.50 per tree

#### Project Goals (GB-WS5):

This project will plant a diverse mix of 14 tree and shrub species to support an ongoing beaver reintroduction initiative. The planting will stabilise riverbanks, improve water retention, and help the landscape manage both drought and flood risk.

#### Benefits & SDG's achieved:

#### Species include..

English Oak

Willow

+12

### Scotland - East Lothian - £6.00 per tree

#### Project Goals (GB-EL1):

This project will establish wide shelterbelts across the exposed farmland, creating protection from harsh coastal winds while strengthening habitat diversity. Over time, these trees will form vital corridors across the site, supporting both the wider rural ecosystem.

#### Benefits & SDG's achieved:

#### Species include..

Sycamore

Rowan Tree

+5

## UK Planting Sites Overview

### England - Birmingham - £6.70 per tree

#### Project Goals (GB-WM1):

This project involves the restoration of fragmented woodland and hedgerow. The species of the site have been specifically selected to tolerate the wet conditions of the site, which will help manage the groundwater in the future.

#### Benefits & SDG's achieved:

#### Species include..

Alder

Goat Willow

+4

### Northern Ireland - Belfast - £7.65 per tree

#### Project Goals (GB-DW1):

This project will involve the creation of high density microforest that will provide a space for wildlife to thrive through a simulated microclimate. Species have been chosen to provide habitats for local birds such as woodpeckers, jay birds, pheasants and kites.

#### Benefits & SDG's achieved:

#### Species include..

Crab Apple

Wild Cherry

+7

## UK Planting Sites Overview

### England - Kent - £9.90 per tree

#### Project Goals (GB-KT6):

We are working with a local farmer to turn degraded agricultural land into woodland. This site provides wildlife corridors to nearby Blean Woods, home to the rare Heath Fritillary butterfly and Lesser Spotted Woodpeckers.

#### Benefits & SDG's achieved:

#### Species include..

Goat Willow

Hawthorn

+10
